

Tailor your product offering to your customer and speed up order provision

Available on
Microsoft AppSource

Organizations lose productivity when processing sales orders when they need to manually cross-reference preferred items to make available to customers.

What is the Sales Assortment accelerator by Prodware?

Sales Assortment is an out-of-the-box accelerator for Dynamics 365 Business Central, and helps manufacturers and distributors improve the sales order process by creating a preferred item list for each customer.

Why choose Sales Assortment accelerator?

- Modern customers expect a personalized and speedy service, and organizations also want to be able to intelligently offer the right products to their clients:
- Either include or exclude items depending on customer preferences and history
- The list is updated through a system process based on the shipped history per customer
- New items can be manually added

Sales cycle flexibility

- Sales Assortment can be used in quote, order and invoice functionality to either include or exclude items

Total control

- Choose between selling items belonging to the system generated list of assortments based on customer history or sell new items
- Users can create an exclusion list to suppress items being sold to that customer

Align sales documents

- New items can be added to the customer's assortment by logging into the customer's assortment list from the sales document.
