mandatory fields
accelerator

Quickly achieve business process compliance and data accuracy in your Dynamics system.

Available on Microsoft AppSource

If you are responsible for managing data quality and accuracy in your team or organisation, you will recognise these issues:

"Our standard system does not reflect the controls we want to put in place."

"Depending on the user and their attention to detail, the records we maintain in G/L, inventory, customers and suppliers can vary."

"We need an easy to use system that we can set-up and run quickly."

Why choose Prodware to support your business process needs in Dynamics 365?

As a Microsoft partner, Prodware has developed and implemented Dynamics projects across Europe.

Our experienced R&D team work closely with our clients to develop additional functionalities that suit their own business compliance and data quality automation needs.

The Mandatory Fields accelerator

- Easy to use interface for Dynamics 365 Business Central users

- Seven areas in Dynamics can be selected and made mandatory fields – customer, vendor, General Ledger account, Items, Resource, Jobs and Fixed Assets

- Out of the box for Business Central

Rapid and easy installation

An out-of-the box solution delivered for a quick start:

- Specific range
- Preconfigured solution
- User manual

Set up the tables you wish to affect

The accelerator automatically sets up the seven tables to modify:

- Blocking field
- Blocking value
- Enable or disable your information message for users by table
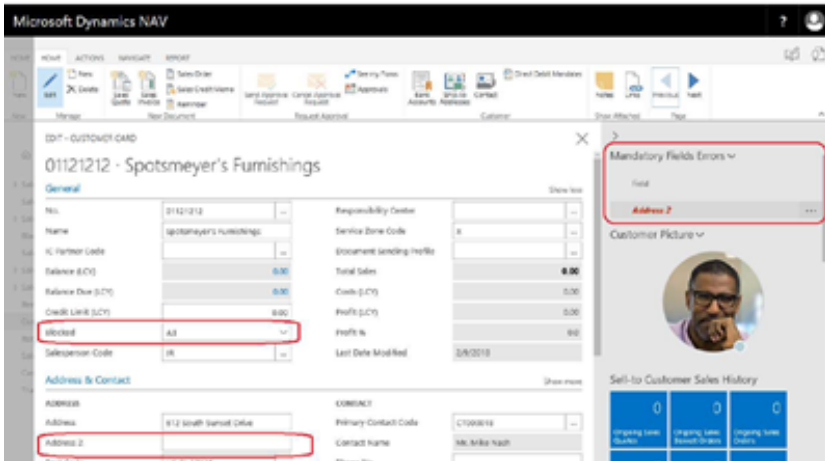

Select fields you wish to control

For each field you can choose to activate control on Insert and/or on Modify.

Update existing records in bulk

Select the table you want to update using the "Update Records" function. The "Blocked Records" button shows a list of blocked records in error to be rectified.

User-friendly interface for quick data fixes

Each time a record is inserted or modified, all fields will be controlled according to the Mandatory Fields' setup. If at least one of these fields is not filled (0 for decimals, false for Booleans, empty for texts or codes etc.), a list of fields in error will be created and the record will be blocked.

This means that the setup blocking field will take the setup blocked value and a List of fields in error will be visible on the record card.

Future proof

Certified for Microsoft AppSource, the solution is available for free trial or online purchasing

Flexible

- Set your own business rules for tables and fields
- Request development outside of the seven pre-configured tables to suit your needs

Secure

Built on a strong and customisable security model that gives your users the guidance they need and your IT team the assurance of compliance
